

Multi-Cloud Platform as a Service for the Enterprise and Service Providers

Create your best-fit multi-cloud solution with Faction. United with VMware & Dell EMC to deliver hybrid and multi-cloud solutions for Enterprises, Service Providers and VMware Cloud on AWS clients.

VMware-driven Private, Hybrid, & Multi-Cloud Solutions

What can you build with a true multi-cloud environment? We deploy VMware & Bare Metal compute clusters, **plus** multi-cloud NAS, attached to AWS, Azure, Google, and more - OR all of them at once.

With full admin-level access it's like controlling an on-prem environment, only connected to public clouds with low latency and a world-class support team.

Leverage Faction environments for Multi-Cloud Production, Disaster Recovery to the Cloud, Virtual Desktops with low-latency public cloud access, and Backup and Dev/Test.

Faction Cloud has a simple building block approach

From tiny private clouds to tens of thousands of servers, scale seamlessly with Faction's simple "building block" approach that allows clients to design and scale their perfect multi-cloud environment.

Our clients can leverage **any** cloud - or **every** cloud with Faction's private connections to all major cloud providers and patented networking technology to make multi-cloud easy.

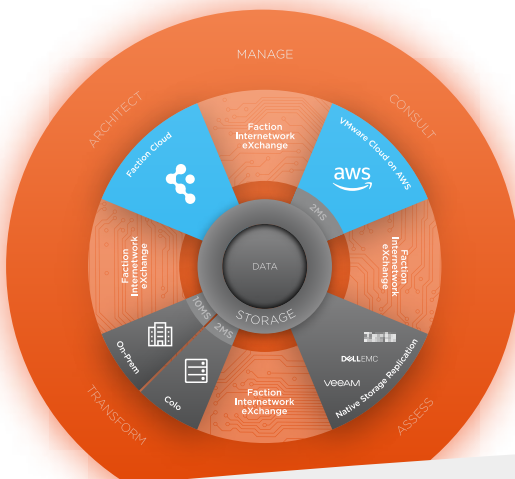

Faction environments are fully managed - we handle datacenters, networking, hardware, and support 24x7 to make multi-cloud a simple service **instead** of a daunting challenge.

Enabling IT teams to find the "best fit" for their applications; anything you can do in an on-prem environment is transported to be a cross-connect away from AWS, Azure, and Google, and network-ready.
